Description

The Alkohit ® X500 is a professional breathalyzer with many exclusive features. Due to its exceptional nature, the breathalyzer is aimed primarily at the business class. The device combines precise measurements with modern design and ergonomics. This breathalyzer provides not only a sense of safety, but also that of comfort and joy in using state-of-the-art technology that will last you for many years.

The device has a brilliant 2.4" diagonal touch screen display with a 320x240 pixel resolution. The X500 features a multilingual on-screen menu (Polish, German, and English), a full three-year warranty, and a high-performance lithium-ion battery that can be charged via a power adapter or a USB port. These are only a few of the many benefits that make the X500 such a functional, innovative and prestigious device.

With its light weight, compact size, elegant protective case, numerous hours of performance on a single-charged battery, and a wide range of operating temperature and advanced measuring technology, the **Alkoholit ® X500 breathalyzer** is a perfect solution not only for managers, directors and VIPs, but also for entrepreneurs who frequently travel and require a reliable and accurate device for monitoring the amount of alcohol in their breath.

The **Alkoholit X500 breathalyzer** measurements can be made by using a mouthpiece or a funnel-shaped cap. The device operates in both active and passive modes. The breathalyzer has an advanced system that controls the proper blowing of air into the device as well as a function to check the device's readiness for measurements. Each user can customize the preferred time and force of the air blown into the device, language support and automatic turn-off time.

With the **capability of 360° rotation and a unique and innovative method of fitting mouthpieces**, Alkoholit ® models allow for comfortable measurement-taking. This solution increases safety in the event of any external factors that may cause the device to move while blowing air (a mouthpiece screws onto the device without harming the user).

Measurement results, including all relevant details of the person tested, can be saved by the operator to the device memory. The memory stores all essential data such as date, time, measurement results and even the temperature at which the measurement has been performed. The device may be used to cooperate with a **wireless D100 thermal printer**.

FEATURES

- High accuracy by using electrochemical sensor technology used in police breathalysers with a guarantee for DKD sensor
- Technologically advanced 32-bit microcontroller
- The use of the latest technology in the world
- Low price in relation to the accuracy of the measurement
- Quick results, even at very high concentrations of alcohol
- Measurement repeatability and stability during tests
- Counter measurements
- Date and Time
- Quick and efficient establishment mouthpiece or cap funnels
- 360° mouthpiece rotation
- Alerts if the sensor has alcohol from a previous measurement
- Easy to read backlit display allows for comfortable measurement reading at night
- Easy of use
- Long life sensor
- A unique breathalyser serial number
- Measuring the length of a control system indicated by sound
- Pneumatic delivery system for a precise dose of blown air
- Casing made of high quality ABS plastic
