

Breathalyser ALKOHIT X60

The Alkoholit X60 breathalyser is the most cost-effective product in a series of electrochemical Alkoholit breathalysers used to perform measurements with a funnel cap (from a distance) or a mouthpiece. The breathalyser can be used to detect alcohol content not only for your own use, but also to control workers in small businesses.

Description

The Alkoholit X60 breathalyser is the most cost-effective product in a series of electrochemical **Alkoholit breathalysers** used to perform measurements with a funnel cap (from a distance) or a mouthpiece. The breathalyser can be used to detect alcohol content not only for your own use, but also to control workers in small businesses.

The Alkoholit X60 breathalyser is an accurate and functional device. It is built with a rechargeable lithium-ion battery, which is characterized by a lack of memory effect, and its self-discharge provides an extremely long life and a willingness to work even after a long period of inactivity. Located in the basic equipment are a USB cable and AC adapter which allow for a charge either by the computer port or power outlet. Its high capacity allows for many hours of work without recharging.

The Alkoholit X60 breathalyser has a unique and innovative fitting of mouthpieces with an optional 360° rotation of which allows the measurements to be comfortably carried out. This increases the safety in the event of external factors causing movement of the machine during air insufflation (the mouthpiece can be twisted without harming the person tested). Also, the use of a funnel mouthpiece, which can perform a large number of high-speed measurements, significantly lowers operating costs.

The preparation time from switching on to measurement is only 5 seconds, and the result is displayed at 1- to several second periods even at high concentrations of alcohol. A high measuring range of up to 6,300 parts per thousand and precise measurements are only a few of the special features of the **Alkohit X60 breathalyser**.

The device features a system that can check if the sensor is ready for the test, as well as the capability to test for unconscious or COPD symptoms. It is also shaped like a mobile phone so it is very handy and easily fits into a pocket or small purse.

FEATURES

- High accuracy by using electrochemical sensor technology used in police breathalysers with a guarantee for DKD sensor
- Technologically advanced 32-bit microcontroller
- The use of the latest technology in the world
- Low price in relation to the accuracy of the measurement
- Quick results, even at very high concentrations of alcohol
- Measurement repeatability and stability during tests
- Counter measurements
- Date and Time
- Quick and efficient establishment mouthpiece or cap funnels
- 360° mouthpiece rotation
- Alerts if the sensor has alcohol from a previous measurement
- Easy to read backlit display allows for comfortable measurement reading at night
- Easy of use
- Long life sensor
- A unique breathalyser serial number
- Measuring the length of a control system indicated by sound
- Pneumatic delivery system for a precise dose of blown air
- Casing made of high quality ABS plastic
