### Description

**The Dräger Alcotest 6810 breathalyser** offers **similar features and accuracy as the Dräger 6510** but has ability to **connect it with PC or special wireless printer** (sold as a part of the package) for printing test results directly from the breathalyser.

**The Dräger Alcotest 6810 breathalyser** offers professional users precise and quick breath alcohol analysis in a user-friendly and compact form. The device is currently used by a large percentage of UK and Worldwide Police Forces and is a Home Office approved unit. Easy to use and precise measurement results can be obtained within a very short period of time. The very latest in electronics technology ensures that the instrument is ready for use very quickly.

The shape of the mouthpiece means you will intuitively fit it correctly. An air outlet which cannot be obstructed prevents any manipulation when the breath sample is given. A spacer on the mouthpiece prevents the test subject's lips from coming into contact with the instrument's housing, and at the same time may be used as a mouthpiece ejector. The individually packaged mouthpieces can be attached to the instrument easily and hygienically.

**Dräger Alcotest 6810 breathalyser** fits into a shirt pocket. The ergonomic design makes the instrument equally easy to use for right and left-handed people. The separation of the grip area and the mouthpiece automatically ensures a certain distance between the hand of the operator and the mouth of the person to be tested.

Interaction between operator and instrument takes place via the backlit display with its easily comprehensible plain text messages. A light emitting diode with different colours and audible signals support the display.

The **latest 250 measurement results** with their respective test numbers are stored in the datalogger. Individual results can be called up from the log by pressing the menu keys.

### FEATURES

- High accuracy by using electrochemical sensor technology used in police breathalysers
- Technologically advanced 32-bit microcontroller
- Ability to connect to special wireless printer
- The use of the latest technology in the world
- Quick results, even at very high concentrations of alcohol
- Measurement repeatability and stability during tests
- Date and Time
- Quick and efficient establishment mouthpiece or cap funnels
- Easy to read backlit display allows for comfortable measurement reading at night
- Easy of use
- Long life sensor
- A unique breathalyser serial number
- Pneumatic delivery system for a precise dose of blown air
- Casing made of high quality ABS plastic
